(Revision of ASME B16.20-2007)

Metallic Gaskets for Pipe Flanges

**Ring-Joint, Spiral-Wound,
and Jacketed**

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

INTENTIONALLY LEFT BLANK

ASME B16.20-2012
(Revision of ASME B16.20-2007)

Metallic Gaskets for Pipe Flanges

**Ring-Joint, Spiral-Wound,
and Jacketed**

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

Two Park Avenue • New York, NY • 10016 USA

Date of Issuance: June 25, 2013

The next edition of this Standard is scheduled for publication in 2017.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Periodically certain actions of the ASME B16 Committee may be published as Cases. Cases and interpretations are published on the ASME Web site under the Committee Pages at <http://cstools.asme.org/> as they are issued.

Errata to codes and standards may be posted on the ASME Web site under the Committee Pages to provide corrections to incorrectly published items, or to correct typographical or grammatical errors in codes and standards. Such errata shall be used on the date posted.

The Committee Pages can be found at <http://cstools.asme.org/>. There is an option available to automatically receive an e-mail notification when errata are posted to a particular code or standard. This option can be found on the appropriate Committee Page after selecting “Errata” in the “Publication Information” section.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assumes any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,
in an electronic retrieval system or otherwise,
without the prior written permission of the publisher.

FOREWORD

Ring-joint gaskets and grooves probably originated in the boiler field, where they were used in various forms for manhole covers, autoclaves, and other closures; however, it was in the oil industry (both in the production and refining of oil) that they received the greatest recognition and were developed into their present form. Their use expanded steadily as temperatures and pressures were increased in steam plants. Tests examining their application in flanges and valves were conducted as early as 1928.

In June 1936, the American Petroleum Institute (API) issued Tentative Standard 5-G-3 on Ring-Joints for Steel Flanges and Flange Unions for use with API Tubular Goods. This standard was known as API Specification 6B, Ring-Joint Flanges. Following the acceptance of ring-joints for flanges and valves by API and the issuance of their standard, ASA B16e on Steel Pipe Flanges and Flanged Fittings was revised to include them, and the 1939 edition included standard dimensions for a full line of ring-joint flanges based on the API standard. Development work continued, and API formulated Standard 6E, Specification for Wellhead Equipment, which included ring-joints not covered in ASA B16e-1939.

In 1949, the American Standards Association (ASA), Sectional Committee B16, Subcommittee 3, Steel Flanges and Flanged Fittings, assembled the available information on ring-joint gaskets into a single standard. ASA approval was granted on April 30, 1952, with the designation ASA B16.20-1952.

An updated version was submitted, and ASA approval was granted on April 4, 1955, with the designation ASA B16.20-1955. Ring gaskets for Class 900 (900 lb at that time) in sizes NPS 26 through 36 were added, and ASA approval was granted on April 2, 1956. The standard was reviewed in 1962, and approval was granted by the ASA on April 25, 1963.

The standard was again reviewed and approval was granted by the American National Standards Institute (ANSI) on April 25, 1973, with the designation of an American National Standard.

API requested that ASME convert their gasket standard, API 601, into an ASME American National Standard. As a result of that request, the standard was expanded to include requirements for spiral-wound and jacketed gaskets that were formerly listed in API 601, 7th edition, 1988. Also, ring-joint groove dimensions were not included, because they were included in ASME/ANSI B16.5-1988, Pipe Flanges and Flanged Fittings, and ASME B16.47-1990, Large Diameter Steel Flanges.

The 1993 edition was approved by the B16 Standards Committee, and, following approval by ASME, approval by ANSI was given on January 22, 1993, with the designation ASME B16.20-1993.

In the 1998 edition of ASME B16.20, reference standards were updated, a quality system program annex was added, inner ring inside diameters for spiral-wound gaskets were revised, and several editorial revisions were made. Following approval by ASME B16 Subcommittee G and the B16 Main Committee, ANSI approved this American National Standard on November 20, 1998.

In 2007, the Standard adopted metric dimensions as an independent standard to the U.S. Customary units, and Mandatory Appendix I was added to cover dimensional tables in U.S. Customary units.

In 2012, the Standard introduced minor revisions to the material requirements for spiral-wound gaskets, along with the tables and figures. A new chapter has been included for Grooved Metal Gaskets With Covering Layers, and Mandatory Appendix II has also been updated to ensure relevancy.

Following approval by B16 Subcommittee G, the Standards Committee, and ASME, ANSI approved this American National Standard on October 22, 2012.

ASME B16 COMMITTEE

Standardization of Valves, Flanges, Fittings, and Gaskets

(The following is the roster of the Committee at the time of approval of this Standard.)

STANDARDS COMMITTEE OFFICERS

C. B. Gillis , Samson Controls	K. Kolb , <i>Alternate</i> , Lamons Gasket Co.

CORRESPONDENCE WITH THE B16 COMMITTEE

General. ASME Standards are developed and maintained with the intent to represent the consensus of concerned interests. As such, users of this Standard may interact with the Committee by requesting interpretations, proposing revisions, and attending Committee meetings. Correspondence should be addressed to:

Secretary, B16 Standards Committee
The American Society of Mechanical Engineers
Two Park Avenue
New York, NY 10016-5990

As an alternative, inquiries may be submitted via email to: SecretaryB16@asme.org.

Proposing Revisions. Revisions are made periodically to the Standard to incorporate changes that appear necessary or desirable, as demonstrated by the experience gained from the application of the Standard. Approved revisions will be published periodically.

The Committee welcomes proposals for revisions to this Standard. Such proposals should be as specific as possible, citing the paragraph number(s), the proposed wording, and a detailed description of the reasons for the proposal, including any pertinent documentation.

Interpretations. Upon request, the B16 Committee will render an interpretation of any requirement of the Standard. Interpretations can only be rendered in response to a written request sent to the Secretary of the B16 Standards Committee.

The request for interpretation should be clear and unambiguous. It is further recommended that the inquirer submit his/her request in the following format:

Subject:	Cite the applicable paragraph number(s) and the topic of the inquiry.
Edition:	Cite the applicable edition of the Standard for which the interpretation is being requested.
Question:	Phrase the question as a request for an interpretation of a specific requirement suitable for general understanding and use, not as a request for an approval of a proprietary design or situation. The inquirer may also include any plans or drawings that are necessary to explain the question; however, they should not contain proprietary names or information.

Requests that are not in this format will be rewritten in this format by the Committee prior to being answered, which may inadvertently change the intent of the original request.

ASME procedures provide for reconsideration of any interpretation when or if additional information that might affect an interpretation is available. Further, persons aggrieved by an interpretation may appeal to the cognizant ASME Committee or Subcommittee. ASME does not “approve,” “certify,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

Attending Committee Meetings. The B16 Standards Committee regularly holds meetings, which are open to the public. Persons wishing to attend any meeting should contact the Secretary of the B16 Standards Committee.

IMPORTANT INFORMATION CONCERNING USE OF ASBESTOS OR ALTERNATIVE MATERIALS

Asbestos is referenced for use as a filler material in metallic gaskets. It has served as a universal sealing material, compatible with most fluid services. It has been of extreme usefulness in minimizing fire hazards.

Certain serious adverse health effects are associated with asbestos, among them the serious and often fatal diseases of lung cancer, asbestosis, and mesothelioma (a cancer of the chest and abdominal linings). The degree of exposure to asbestos varies with the product and the work practices involved.

Consult the most recent edition of the Occupational Safety and Health Administration, U.S. Department of Labor, Occupational Safety and Health Standard for Asbestos, Tremolite, Anthophyllite, and Actinolite, 29 Code of Federal Regulations Section 1910.1001; the U.S. Environmental Protection Agency National Emission Standard for Asbestos, 40 Code of Federal Regulations Sections 61.140 through 61.156; and the proposed rule by the U.S. Environmental Protection Agency proposing labeling requirements and phased banning of asbestos products, published at 51 Federal Register 3738-3759 (January 29, 1986).

There are currently in use and under development a number of substitute materials to replace asbestos in certain applications. Manufacturers and users are encouraged to develop and use effective substitute materials that can meet the specifications for, and operating requirements of, the equipment to which they would apply.

Information concerning safety and health risks and proper precautions with respect to particular materials and conditions should be obtained from one's employer, the manufacturer or supplier of that material, or the Material Safety Data Sheet.

ASME B16.20-2012

SUMMARY OF CHANGES

Following approval by the B16 Committee and ASME, and after public review, ASME B16.20-2012 was approved by the American National Standards Institute on October 22, 2012.

ASME B16.20-2012 consists of editorial changes, revisions, and corrections identified by a margin note, (12), placed next to the affected area.

METALLIC GASKETS FOR PIPE FLANGES

Ring-Joint, Spiral-Wound, and Jacketed

1 SCOPE

(12) 1.1 General

This Standard covers materials, dimensions, tolerances, and markings for metal ring-joint gaskets, spiral-wound metal gaskets, metal-jacketed gaskets, and grooved metal gaskets with covering layers. These gaskets are dimensionally suitable for use with flanges described in reference flange standards ASME B16.5, ASME B16.47, API Specification 6A, and ISO 10423.

1.2 Quality Systems

Requirements relating to the product manufacturers' quality system programs are described in Nonmandatory Appendix A.

1.3 References

Standards and specifications adopted by reference in this Standard are shown in Mandatory Appendix II, which is part of this Standard.

1.4 Relevant Units

This Standard states values in both SI (Metric) and U.S. Customary units. These systems of units are to be regarded separately as standard. Within the text, the U.S. Customary units are shown in parentheses or in separate tables that appear in Mandatory Appendix I. The values stated in each system are not exact equivalents; therefore, it is required that each system of units be used independently of the other. Combining values from the two systems constitutes nonconformance with the Standard.

2 RING-JOINT GASKETS

2.1 Types

Ring-joint gaskets shall be either octagonal or oval in cross section.

2.2 Size

Ring-joint gaskets shall be identified by an R, RX, or BX number that relates to flange size (NPS), pressure class, and the appropriate flange standards (ASME B16.5, ASME B16.47, API Specification 6A, or ISO 10423).

Table 1 Maximum Hardness for Ring Gaskets

Ring Gasket Material	Maximum Hardness	
	Brinell	Rockwell "B" Scale
Soft iron [Note (1)]	90	56
Low-carbon steel	120	68
4–6 chrome $\frac{1}{2}$ Mo	130	72
Type 410	170	86
Type 304	160	83
Type 316	160	83
Type 347	160	83

NOTE:

(1) May be low-carbon steel, not to exceed maximum hardness of 90 Brinell — 56 Rockwell "B."

2.3 Materials

2.3.1 General. Ring-joint gasket materials, some of which are listed in Table 1, shall be selected by the user based on suitability for the service conditions.

It is recommended that ring-joint gaskets be of a lesser hardness than that of the mating flanges.

2.3.2 Hardness. Ring-joint gaskets of materials listed in Table 1 shall have a hardness equal to or less than that shown in Table 1.

2.4 Marking

The outer surface of each gasket shall carry the manufacturer's name or identification trademark and gasket number prefixed by the letters R, RX, or BX, followed by the gasket material identification. Materials shall be identified as shown in Table 2. The gasket shall also be marked with an ASME B16.20 designation. The marking shall be applied so as not to harmfully distort the gasket or affect the integrity of the seal.

2.5 Dimensions and Tolerances

Dimensions and tolerances for ring-joint gaskets shall be as shown in Tables 3 through 8 (Tables I-1, I-2, and I-3 of Mandatory Appendix I).

2.6 Surface Finish

Types R and RX gaskets shall have a surface finish not rougher than 1.6 μm (63 $\mu\text{in.}$) roughness. Type BX

Table 2 Ring Gasket Markings

Ring Gasket Material	Identification	Marking Example [Note (1)]
Soft iron [Note (2)]	D	R51D
Low-carbon steel	S	R51S
4–6 chrome $\frac{1}{2}$ Mo	F5 [Note (3)]	R51F5
Type 410	S 410	R51S410
Type 304	S 304	R51S304
Type 316	S 316	R51S316
Type 347	S 347	R51S347

NOTES:

- (1) This number shall be preceded by the manufacturer's name or identification trademark.
- (2) May be low-carbon steel, not to exceed maximum hardness of 90 Brinell — 56 Rockwell "B."
- (3) F5 identification designates ASTM Specification A182-72 chemical composition requirements only.

gaskets shall have a surface finish not rougher than $0.8 \mu\text{m}$ ($32 \mu\text{in.}$) roughness. Surface finish shall pertain to the gasket-sealing surface.

2.7 Identification Number

Dimensional reference identification numbers are assigned to ring-joint gaskets and shown in Tables 3 through 8 (Tables I-1, I-2, and I-3 of Mandatory Appendix I).

3 SPIRAL-WOUND GASKETS

3.1 Size and Class

Spiral-wound gaskets, including centering ring and inner ring (paras. 3.2.4 and 3.2.5), are identified by flange size (NPS), pressure class, and the appropriate flange standard (ASME B16.5 or ASME B16.47).

3.2 Dimensions and Tolerances

3.2.1 General. Dimensions and tolerances for spiral-wound gaskets, centering rings, and inner rings shall be in accordance with Tables 9 through 14 (Tables I-4 through I-9 of Mandatory Appendix I) and as specified in this section (see also Figs. 1 and I-1).

3.2.2 Construction. Spiral-wound gaskets shall be constructed as alternate plies (circular layers counted as revolutions) of preformed metal windings and pliant fillers that are spirally wound. For the finished gasket, the filler shall be essentially flush with, but not below, the metal winding on both contact faces of the gasket. The metal strip in the winding shall be 0.15-mm (0.006-in.) to 0.23-mm (0.009-in.) thick. The filler material thickness shall be determined by the manufacturer.

3.2.3 Metal Joining. The inner windings shall have a minimum of three plies of preformed metal strip without filler. The initial two plies shall have spot welds spaced

around the inner circumference. The minimum number of welds shall be three. The maximum distance between welds shall be 76 mm (3.0 in.). The outer windings, which shall have a minimum of three plies of preformed metal without filler, shall be spot-welded circumferentially with a minimum of three welds, the last of which shall be the terminal weld.

The distance of the first weld from the terminal weld shall be no greater than 38 mm (1.5 in.). Up to four additional loose preformed metal windings beyond the terminal weld may be used to retain the gasket into the centering ring.

3.2.4 Centering Ring. All spiral-wound gaskets shall be furnished assembled into a centering ring. The centering ring thickness shall be from 2.97 mm (0.117 in.) to 3.33 mm (0.131 in.) and suitably grooved on the inside diameter so as to retain the gasket.

3.2.5 Inner Ring. Inward buckling of spiral-wound gaskets has been identified as a potential problem. Inner rings shall be furnished with all spiral-wound gaskets having PTFE (polytetrafluoroethylene) filler material. Inner rings for flexible graphite-filled, spiral-wound gaskets shall be furnished unless the purchaser specifies otherwise.

For all filler materials, inner rings shall be furnished in spiral-wound gaskets for

- (a) NPS 24 and larger in Class 900
- (b) NPS 12 and larger in Class 1500
- (c) NPS 4 and larger in Class 2500

Inner rings are required for these gaskets due to high available bolt loads, which may result in outer ring damage.

The inner ring thickness shall be from 2.97 mm to 3.33 mm (0.117 in. to 0.131 in.).

Tables 12 through 14 (Tables I-7 through I-9 of Mandatory Appendix I) show inner ring inside diameters that may extend a maximum of 1.5 mm (0.06 in.) into the flange bore under the worst combination of flange bore, eccentric installation, and tolerance.

Gaskets with inner rings should be used only with socket welding, lapped, welding neck, and integral flanges. Reference Table 15 for minimum pipe wall thickness for use with gaskets with inner rings. Reference Tables 16 through 18 (Tables I-10 and I-11 of Mandatory Appendix I) for maximum allowable bore for use with gaskets without inner rings.

3.2.6 Gasket Compression. Spiral-wound gaskets NPS $\frac{1}{2}$, NPS $\frac{3}{4}$, and NPS 1 in Classes 150, 300, and 600 shall be designed so that a uniform bolt stress of 172 MPa (25,000 psi), based on the nominal bolt root diameter, will compress the gasket to a thickness of $3.30 \text{ mm} \pm 0.13 \text{ mm}$ (0.130 in. \pm 0.005 in.). All other gasket sizes and classes shall be designed so that a uniform bolt stress of 207 MPa (30,000 psi) will compress the gasket to a thickness of $3.30 \text{ mm} \pm 0.13 \text{ mm}$ (0.130 in. \pm 0.005 in.).

3.3 Materials

Metal windings and filler materials shall be in accordance with Table 19. The inner ring material should match the winding material unless the purchaser specifies otherwise. The centering ring may be carbon steel that is painted, metal plated, or otherwise coated to inhibit atmospheric corrosion.

3.4 Marking

3.4.1 General. The centering ring of each spiral-wound gasket shall be permanently marked. The lettering height shall be a minimum of 2.5 mm (0.1 in.). The following information shall be included with the centering ring markings:

- (a) manufacturer's name or trademark.
- (b) flange size (NPS).
- (c) pressure class.
- (d) winding metal abbreviation (see Table 19), except that the abbreviation may be omitted when 304 stainless steel is used.
- (e) filler material abbreviation (see Table 19).
- (f) centering and inner ring metal abbreviation (see Table 19), except that the abbreviation may be omitted when carbon steel is used for the outer ring and 304 stainless steel is used for the inner ring.
- (g) flange identification. Gaskets intended for ASME B16.47 flanges shall be marked B16.47 A or B16.47 B, as applicable. Gaskets intended for ASME B16.5 flanges need not be so marked. Illustrative marking examples are shown in Table 20.
- (h) ASME B16.20 designation.

3.4.2 Pressure Class. Gaskets suitable for more than one pressure class shall be marked with all applicable classes, as shown in Table 20.

3.4.3 Color Coding. Spiral-wound gaskets shall be marked with a color code that identifies the windings and filler materials. A continuous color around the outer edge of the centering ring shall identify the winding metal. The color identifying the filler material for NPS 1½ and larger shall have four intermittent stripes spaced approximately 90 deg apart on the outer edge of the centering ring. Smaller size gaskets shall have a minimum of two stripes 180 deg apart. The colors shall conform to those listed in Table 19.

4 JACKETED GASKETS

4.1 Size and Pressure Class

Jacketed gaskets are identified by flange size (NPS), pressure class, and the appropriate flange standard (ASME B16.5 or ASME B16.47).

4.2 Design

4.2.1 General. Jacketed gaskets shall be made with a filler material enclosed in a metal jacket.

4.2.2 Jacket Thickness. The jacket metal thickness shall be a minimum of 0.38 mm (0.015 in.).

4.2.3 Filler Thickness. The filler thickness shall be a minimum of 1.5 mm (0.06 in.).

4.2.4 Miscellaneous. Other design details, including the density of the filler, shall be the gasket manufacturer's responsibility.

4.3 Dimensions and Tolerances

Gasket dimensions and tolerances shall be in accordance with Tables 21, 22, or 23 (Tables I-12, I-13, or I-14 of Mandatory Appendix I and see also Figs. 2 and I-2).

4.4 Materials

(12)

Metal jacket and filler material shall be selected from Table 24 or as agreed between the purchaser and manufacturer. For recommendations regarding use of jacketed gaskets with ASME B16.5 flanges, see ASME B16.5, para. 5.4.

4.5 Marking

4.5.1 Applied Marking. Jacketed gaskets shall be marked with waterproof ink or equivalent. Where gasket size does not permit such markings, a separate attached marking tag may be used. The lettering height shall be a minimum of 5 mm (0.2 in.). The following information shall be included with the markings:

- (a) manufacturer's name or trademark.
- (b) flange size (NPS).
- (c) pressure class.
- (d) jacketed material abbreviation (see Table 24), except that the abbreviation may be omitted when soft carbon steel is used.
- (e) filler material abbreviation (see Table 24).
- (f) flange identification. Gaskets intended for ASME B16.47 flanges shall be marked B16.47 A or B16.47 B, as applicable. Gaskets intended for ASME B16.5 flanges need not be so marked. Illustrative marking examples are shown in Table 25.
- (g) ASME B16.20 designation.

4.5.2 Pressure Class. Gaskets suitable for more than one pressure class shall be marked with all applicable classes.

5 GROOVED METAL GASKETS WITH COVERING LAYERS

(12)

5.1 Size and Class

Grooved metal gaskets with covering layers having a centering ring are identified by flange size (NPS), pressure class, and the appropriate flange standard (ASME B16.5 or ASME B16.47).

5.2 Dimensions and Tolerances

5.2.1 General. Dimensions and tolerances for grooved metal gaskets with covering layers and centering rings shall be in accordance with Fig. 3 and Tables 26 through 28 (Tables I-15 through I-17 of Mandatory Appendix I) and as specified in this section.

5.2.2 Construction. Grooved metal gaskets with covering layers shall be constructed as a concentrically grooved metal core (sealing element) with a centering ring. The grooved metal portion of the finished gasket shall be faced with a covering layer on both sealing surfaces that is 0.46-mm (0.018-in.) to 0.56-mm (0.022-in.) thick. The thickness of the metal core of the gasket shall be 2.97 mm (0.117 in.) to 3.33 mm (0.131 in.). The thickness on any single gasket shall be uniform within a maximum tolerance range of 0.13 mm (0.005 in.).

5.2.3 Welding. Welding is permitted only in NPS 14 and larger gaskets. Welding shall be subject to the following:

- (a) Full penetration welds shall be used.
- (b) Where only two welds are used, the minimum weld spacing shall be 152 mm (6 in.). Where more than two welds are required, minimum weld spacing shall be 609 mm (24 in.). Weld spacing shall be measured along the inside circumference of the metal core. When material availability precludes this weld spacing, then additional welding, as agreed by the purchaser and manufacturer, is permitted.
- (c) The grooves shall be machined into the core after welding.
- (d) In welded areas, the groove, peak profile, and base metal shall be uniform in spacing, thickness, and height with the adjacent metal core.
- (e) When specified by the purchaser, weld inspection methods, such as ultrasonic or radiographic, along with acceptance criteria, shall be established.

5.2.4 Centering Ring. A centering ring is required and used to help position the gasket within the flange bolt circle. Unless otherwise specified by the purchaser, the centering ring shall be 1.6-mm (0.06-in.) nominal thickness and shall be suitably attached to the grooved metal core using an integral (one-piece or welded) or nonintegral attachment method. The thickness of the centering ring shall not exceed the thickness of the core.

5.3 Materials

5.3.1 Covering. Covering material shall be selected from Table 29.

5.3.2 Core. Core material shall be selected from Table 29.

5.3.3 Centering Ring. When carbon steel centering rings are selected, they shall be painted, metal plated, or otherwise coated to inhibit atmospheric corrosion.

5.4 Marking

5.4.1 General. The centering ring shall be permanently marked. The lettering height shall be a minimum of 2.5 mm (0.1 in.), except where space requirements dictate use of a smaller size character. The following information shall be included:

- (a) manufacturer's name or trademark.
- (b) flange size (NPS).
- (c) pressure class.
- (d) metal core abbreviation (Table 29).
- (e) covering material abbreviation (Table 29).
- (f) centering ring metal abbreviation (Table 29), except when carbon steel is used.
- (g) flange identification. Gaskets used for ASME B16.47 flanges shall be marked B16.47 A or B16.47 B, as applicable. Illustrative marking examples are shown in Table 30 (see also Fig. 4).
- (h) ASME B16.20 designation.

5.4.2 Pressure Class. Gaskets suitable for more than one pressure class shall be marked with all applicable classes, as shown in Table 30.

5.4.3 Color Coding. Gaskets shall be marked with a color code that identifies the metal core and facing materials. A continuous color around the outer edge of the centering ring shall identify the core metal. The color identifying the facing material for NPS 3 and larger shall have a minimum of four stripes equally spaced on the outer edge of the centering ring. Smaller size gaskets shall have a minimum of two stripes 180 deg apart. The colors shall conform to those listed in Table 29. Special material not listed in Table 29 shall not be color coded. Users shall refer to the guide ring marking for material.

GENERAL NOTES:

(a) All dimensions are in millimeters.

(b) Tolerances:

 A = width of ring, ± 0.20 B, H = height of ring, $+1.3, -0.5$

Variation in height throughout the entire circumference of any given ring shall not exceed 0.5 within these tolerances.

 C = width of flat on octagonal ring, ± 0.20 P = average pitch diameter of ring, ± 0.18 R_1 = radius in ring, ± 0.5 23 deg = angle, ± 0 deg 30 min.

RX-215	140.89	11.91	5.33	4.24 (3)	25.40	1.5 (2)	...

GENERAL NOTES:

(a) All dimensions are in millimeters.

(b) Tolerances:

A = width of ring, +0.20, -0.00

Variation in width throughout the entire circumference of any ring shall not exceed 0.10 within these tolerances.

C = width of flat, +0.15, -0.00*D* = height of outside bevel, +0.0, -0.76*E* = hole size, ±0.5*H* = height of ring, +0.20, -0.00

Variation in height throughout the entire circumference of any ring shall not exceed 0.10 within these tolerances.

OD = outside diameter of ring, +0.51, -0.00*R*₁ = radius of ring, ±0.5

23 deg = angle, ±0 deg 30 min.

NOTES:

(1) Rings RX-82 through RX-91 only require one pressure passage hole as illustrated. The centerline of the hole shall be located at the mid-point of dimension *C*.

(2) Tolerance on these dimensions is +0.5, -0.0.

(3) Tolerance on these dimensions is +0.00, -0.38.

GENERAL NOTES:

(a) All dimensions are in millimeters.

(b) Radius, R , shall be 8% to 12% of the gasket height, H .

(c) Tolerances:

 A = width of ring, +0.20, -0.00

Variation in width throughout the entire circumference of any ring shall not exceed 0.10 within these tolerances.

 C = width of flat, +0.15, -0.00 D = hole size, ± 0.5 H = height of ring, +0.20, -0.00

Variation in height throughout the entire circumference of any ring shall not exceed 0.10 within these tolerances.

 OD = outside diameter of ring, +0.00, -0.15 ODT = outside diameter of flat, ± 0.05 R = radius of ring [see General Note (b)]23 deg = angle, ± 0 deg 15 min.**NOTE:**(1) One pressure passage hole is required per gasket as illustrated. The centerline of the hole shall be located at the midpoint of dimension C .

GENERAL NOTES:

- (a) All dimensions are in millimeters.
 (b) For reference, see Fig. 1.
 (c) The gasket thickness tolerance is ± 13 mm measured across the metallic portion of the gasket, not including the filler, which may protrude slightly beyond the metal.
 (d) For limitations on the maximum flange bore for use with these spiral-wound gaskets, see Table 16.

NOTES:

- (1) Refer to para. 3.2.5 for required use of inner rings.
 (2) The gasket outside diameter tolerance for NPS $\frac{1}{2}$ through NPS 8 is ± 0.8 mm; for NPS 10 through NPS 24, $+1.5$ mm, -0.8 mm.
 (3) The gasket inside diameter tolerance for NPS $\frac{1}{2}$ through NPS 8 is ± 0.4 mm; for NPS 10 through NPS 24, ± 0.8 mm.
 (4) The centering ring outside diameter tolerance is ± 0.8 mm.
 (5) There are no Class 400 flanges in NPS $\frac{1}{2}$ through NPS 3 (use Class 600), Class 900 flanges in NPS $\frac{1}{2}$ through NPS $2\frac{1}{2}$ (use Class 1500), or Class 2500 flanges NPS 14 and larger.

(12)

GENERAL NOTES:

- (a) All dimensions are in millimeters.
(b) For reference, see Fig. 1.
(c) The gasket thickness tolerance is ± 0.13 mm measured across the metallic portion of the gasket, not including the filler, which may protrude slightly beyond the metal.
(d) For limitations on the maximum flange bore for use with these spiral-wound gaskets, see Table 17.
(e) ASME B16.47 Series A flanges NPS 12 through NPS 24 have the same raised face dimensions as ASME B16.5 flanges.

NOTES:

- (1) Refer to para. 3.2.5 for required use of inner rings.
(2) The gasket inside diameter tolerance for NPS 26 through NPS 34 is ± 0.8 mm, and the tolerance for NPS 36 through NPS 60 is ± 1.5 mm.
(3) The gasket outside diameter tolerance for NPS 26 through NPS 60 is ± 1.5 mm.
(4) The centering ring outside diameter tolerance is ± 0.8 mm.
(5) There are no Class 900 flanges NPS 50 and larger.

GENERAL NOTES:

- All dimensions are in millimeters.
- For reference, see Fig. 1.
- The gasket thickness tolerance is ± 0.13 mm measured across the metallic portion of the gasket, not including the filler, which may protrude slightly beyond the metal.
- For limitations on the maximum flange bore for use with these spiral-wound gaskets, see Table 18.

NOTES:

- Refer to para. 3.2.5 for required use of inner rings.
- The gasket inside diameter tolerance for NPS 26 through NPS 34 is ± 0.8 mm, and the tolerance for NPS 36 through NPS 60 is ± 1.3 mm.
- The gasket outside diameter tolerance for NPS 26 through NPS 60 is ± 1.5 mm.
- The centering ring outside diameter tolerance is ± 0.8 mm.
- There are no Class 900 flanges NPS 50 and larger.

24	603.3	603.3	590.6	590.6	590.6	577.9	...

GENERAL NOTES:

- (a) All dimensions are in millimeters.
- (b) The inner-ring thickness shall be 2.97 mm to 3.33 mm.
- (c) For sizes NPS $\frac{1}{2}$ through NPS 3, the inside diameter tolerance is ± 0.8 mm; for larger sizes, the inside diameter tolerance is ± 1.5 mm. See Table 15 for minimum pipe wall thicknesses that are suitable for use with standard inner rings.
- (d) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

- (1) There are no NPS $\frac{1}{2}$ through NPS 3 Class 400 flanges (use Class 600), NPS $\frac{1}{2}$ through NPS $2\frac{1}{2}$ Class 900 flanges (use Class 1500), or NPS 14 and larger Class 2500 flanges.

Table 13 Inner-Ring Inside Diameters for Spiral-Wound Gaskets Used Between ASME B16.47 Series A Flanges

Flange Size (NPS)	Pressure Class				
	150	300	400	600	900 [Note (1)]

58	1 460.5	1 447.8	1 454.2	1 473.2	...
60	1 511.3	1 524.0	1 517.7	1 530.4	...

GENERAL NOTES:

- (a) All dimensions are in millimeters.
- (b) The inner-ring thickness shall be 2.97 mm to 3.33 mm.
- (c) The inside diameter tolerance is ± 3.0 mm.
- (d) These inner rings are suitable for use with pipe walls 9.53 mm or thicker.
- (e) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

- (1) There are no Class 900 flanges NPS 50 and larger.

Table 14 Inner-Ring Inside Diameters for Spiral-Wound Gaskets Used Between ASME B16.47 Series B Flanges

Flange Size (NPS)	Pressure Class

60	1 535.2	1 557.3	1 517.7	1 530.4	...

GENERAL NOTES:

- (a) All dimensions are in millimeters.
- (b) The inner-ring thickness shall be 2.97 mm to 3.33 mm.
- (c) The inside diameter tolerance is ± 3.0 mm.
- (d) These inner rings are suitable for use with pipe walls 9.53 mm or thicker.
- (e) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

- (1) There are no Class 900 flanges NPS 50 and larger.

Table 15 Minimum Pipe Wall Thickness Suitable for Use of Spiral-Wound Gaskets With Inner Rings for ASME B16.5 Flanges

Flange Size (NPS)	Pressure Class					
	150	300	400	600	900	1500 2500
1/2 3/4 1	Schedule 80					
1 1/4 1 1/2 2 2 1/2 3	Schedule 40					
4 5 6	Schedule 80					
8 10 12 14 16 18 20 24	Schedule 10S	Schedule 30		Schedule 80		

GENERAL NOTES:

- (a) The pipe wall schedules identified represent the minimum recommended pipe wall thickness suitable for use with inner rings for ASME B16.5 flanges. (Reference ASME B36.10M and B36.19M.)
- (b) Gaskets with inner rings should be used only with socket welding, lapped, welding neck, and integral flanges.
- (c) Refer to para. 3.2.5 for required use of inner rings.

Table 16 Maximum Bore of ASME B16.5 Flanges for Use With Spiral-Wound Gaskets

20								
24								

GENERAL NOTES:

- (a) This Table shows the maximum bore of flanges for which the spiral-wound gasket dimensions shown in Table 9 are recommended, considering the tolerances involved, possible eccentric installation, and the possibility that the gasket may extend into the assembled flange bore.
- (b) For maximum permissible flange bores for nonmandatory inner rings, see Table 15.
- (c) Abbreviations: SO = slip on and threaded, WN = welding neck, and SW = standard wall.

NOTES:

- (1) Refer to para. 3.2.5 for required use of inner rings. These inner rings may extend into the pipe bore a maximum of 1.5 mm under the worst combination of maximum bore, eccentric installation, and additive tolerances.
- (2) In these sizes, the gasket is suitable for a welding neck flange with a standard wall bore, if the gasket and flanges are assembled concentrically. This also applies to a nozzle. It is the user's responsibility to determine if the gasket is satisfactory for a flange of any larger bore.
- (3) Gaskets in these sizes are suitable for slip-on flanges only if the gaskets and flanges are assembled concentrically.
- (4) A nozzle is a long welding neck; the bore equals the flange NPS.
- (5) An NPS 24 gasket is suitable for nozzles.

Table 17 Maximum Bore of ASME B16.47 Series A Flanges for Use With Spiral-Wound Gaskets

60	(1)	(2)	(2)	(2)	(3)

GENERAL NOTES:

- (a) This Table shows the maximum bore of flanges for which the spiral-wound gasket dimensions shown in Table 10 are recommended, considering the tolerances involved, the possibility of eccentric installation, and the possibility that the gasket may extend into the assembled flange bore.
- (b) Refer to para. 3.2.5 for required use of inner rings.

NOTES:

- (1) Applies only to welding neck flanges with a bore not larger than the inside diameter of a 4.75-mm wall pipe. Larger bores must be checked individually.
- (2) Applies only to welding neck flanges with a bore not larger than the inside diameter of a 6.4-mm wall pipe, except that NPS 38, Class 300, is not suitable for a bore larger than the inside diameter of a 7.6-mm wall pipe. Larger bores must be checked individually.
- (3) There are no Class 900 flanges NPS 50 and larger.

GENERAL NOTES:

(a) This Table shows the maximum bore of flanges for which the spiral-wound gasket dimensions shown in Tables 11 and I-6 are recommended, considering the tolerances involved, the possibility of eccentric installation, and the possibility that the gasket may extend into the assembled flange bore.

(b) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

(1) There are no Class 900 flanges NPS 50 and larger.

(12) **Table 19 Color Coding and Abbreviations for Spiral-Wound Gasket Materials**

Material	Abbreviation	Color Code
Metallic Winding Materials		
Carbon steel	CRS	Silver
304 SS	304	Yellow
304 L SS	304 L	No color
309 SS	309	No color
310 SS	310	No color
316 L SS	316 L	Green
317 L SS	317 L	Maroon
347 SS	347	Blue
321 SS	321	Turquoise
430 SS	430	No color

GENERAL NOTES:

- (a) All dimensions are in millimeters.
 (b) For reference, see Fig. 2.
 (c) The gasket thickness tolerance is +0.8 mm, -0.0 mm.

NOTES:

- (1) For gaskets NPS 1/2 through NPS 24, the outside and inside diameter tolerances are +1.5 mm, -0.0 mm.
 (2) There are no Class 400 flanges NPS 1/2 through NPS 3 (use Class 600), Class 900 flanges NPS 1/2 through NPS 2 1/2 (use Class 1500), or Class 2500 flanges NPS 14 and larger.

60	1 536.7	1 711.5	1 641.6	1 679.7	1 730.5	...

GENERAL NOTES:

- (a) All dimensions are in millimeters.
 (b) For reference, see Fig. 2.
 (c) The gasket thickness tolerance is +0.8 mm, −0.0 mm.

NOTES:

- (1) For gaskets NPS 26 through NPS 60, the outside diameter and inside diameter tolerances are +3.3 mm, −0.0 mm.
 (2) There are no Class 900 flanges NPS 50 and larger.

GENERAL NOTES:

- (a) All dimensions are in millimeters.
 (b) For reference, see Fig. 3.

NOTES:

- (1) The gasket inside diameter (d1) tolerance for NPS 26 through NPS 34 is ± 0.8 mm, and the tolerance for NPS 36 through NPS 60 is ± 1.5 mm.
 (2) The gasket outside diameter (d2) tolerance for NPS 26 through NPS 60 is ± 1.5 mm.
 (3) The centering ring outside diameter (d3) tolerance is ± 0.8 mm.
 (4) There are no Class 900 flanges NPS 50 and larger.

GENERAL NOTES:

- (a) All dimensions are in millimeters.
 (b) For reference, see Fig. 3.

NOTES:

- (1) The gasket inside diameter (d1) tolerance for NPS 26 through NPS 34 is ± 0.8 mm, and the tolerance for NPS 36 through NPS 60 is ± 1.5 mm.
 (2) The gasket outside diameter (d2) tolerance for NPS 26 through NPS 60 is ± 1.5 mm.
 (3) The centering ring outside diameter (d3) tolerance is ± 0.8 mm.
 (4) There are no Class 900 flanges NPS 50 and larger.

Table 29 Color Coding and Abbreviations for Grooved Metal Gaskets With Covering Layers Materials

(12)

Material	Abbreviation	Color Code
Grooved Metal Core Materials		
Carbon steel	CRS	Silver
304 SS	304	Yellow
304 L SS	304 L	No color
309 SS	309	No color
310 SS	310	No color
316 L SS	316 L	Green
317 L SS	317 L	Maroon
347 SS	347	Blue
321 SS	321	Turquoise
430 SS	430	No color
Ni–Cu
Monel 400	MON	Orange
Grade 400
Nickel 200	NI	Red
Titanium	TI	Purple
20Cb-3 alloy	A-20	Black
Ni–Mo
Hastelloy B	HAST B	Brown
Grade B2
Grade B3
Ni–Mo–Cr
Hastelloy C	HAST C	Beige
Grade C-276
Ni–Cr–Fe
Inconel 600	INC 600	Gold
Grade 600
Ni–Cr–Fe–Cb
Inconel 625	INC 625	Gold
Grade 625
Ni–Cr–Fe–Ti
Inconel X-750	INX	No color
Grade X-750
Ni–Fe–Cr
Incoloy 800	IN 800	White
Grade 800
Ni–Fe–Cr–Mo–Cu
Incoloy 825	IN 825	White
Grade 825
Zirconium	ZIRC	No color
All Other Materials	Manufacturer's standard	No color
Nonmetallic Covering Materials		
Polytetrafluoroethylene	PTFE	White stripe
Flexible graphite	FG	Gray stripe
Vermiculite	...	Light blue stripe
Phlogopite (magnesium mica)	...	Light blue stripe

(12) **Table 30 Example Markings for Grooved Metal Gaskets With Covering Layers**

Description	Marking
NPS 3, Class 300 and 600 ASME B16.5 gaskets having a 304 core and a flexible graphite facing material	3-300/600-FG (Manufacturer's trademark) ASME B16.20
NPS 12, Class 1500 ASME B16.5 gasket having an Inconel core and PTFE facing material	12-1500 INC 600-PTFE (Manufacturer's trademark) ASME B16.20

MANDATORY APPENDIX I

DIMENSIONS OF GASKETS IN U.S. CUSTOMARY UNITS

This Mandatory Appendix consists of Figs. I-1 and I-2 and U.S. Customary versions of metric Tables 3, 5, 7, 9-14, 16, 17, and 21-23 (see Tables I-1 through I-17).

GENERAL NOTES:

(a) All dimensions are in inches.

(b) Tolerances:

 A = width of ring, ± 0.008 B, H = height of ring, $+0.05, -0.02$

Variation in height throughout the entire circumference of any given ring shall not exceed 0.02 within these tolerances.

 C = width of flat on octagonal ring, ± 0.008 P = average pitch diameter of ring, ± 0.007 R_1 = radius in ring, ± 0.02 23 deg = angle, $\pm 1/2$ deg

GENERAL NOTES:

(a) All dimensions are in inches.

(b) Tolerances:

A = width of ring, +0.008, -0

Variation in width throughout the entire circumference of any ring shall not exceed 0.004 within these tolerances.

C = width of flat, +0.006, -0*D* = height of outside bevel, +0, -0.030*E* = hole size, ±0.02*H* = height of ring, +0.008, -0

Variation in height throughout the entire circumference of any ring shall not exceed 0.004 within these tolerances.

OD = outside diameter of ring, +0.020, -0*R*₁ = radius of ring, ±0.02

23 deg = angle, ±1/2 deg

NOTES:(1) Rings RX-82 through RX-91 only require one pressure passage hole as illustrated. The centerline of the hole shall be located at the mid-point of dimension *C*.

(2) Tolerance on these dimensions is +0.02, -0.

(3) Tolerance on these dimensions is +0, -0.015.

GENERAL NOTES:

(a) All dimensions are in inches.

(b) Radius, R , shall be 8% to 12% of the gasket height, H .

(c) Tolerances:

 A = width of ring, +0.008, -0

Variation in width throughout the entire circumference of any ring shall not exceed 0.004 within these tolerances.

 C = width of flat, +0.006, -0 D = hole size, ± 0.02 H = height of ring, +0.008, -0

Variation in height throughout the entire circumference of any ring shall not exceed 0.004 within these tolerances.

 OD = outside diameter of ring, +0, -0.005 ODT = outside diameter of flat, ± 0.002 R = radius of ring [see General Note (b)]23 deg = angle, $\pm \frac{1}{4}$ deg**NOTE:**(1) One pressure passage hole is required per gasket as illustrated. The centerline of the hole shall be located at the midpoint of dimension C .

GENERAL NOTES:

- (a) All dimensions are in inches.
 (b) For reference, see Fig. I-1.
 (c) The gasket thickness tolerance is ± 0.005 in. measured across the metallic portion of the gasket, not including the filler, which may protrude slightly beyond the metal.
 (d) For limitations on the maximum flange bore for use with these spiral-wound gaskets, see Table I-10.

NOTES:

- (1) Refer to para. 3.2.5 for required use of inner rings.
 (2) The gasket outside diameter tolerance for NPS $\frac{1}{2}$ through NPS 8 is ± 0.03 in.; for NPS 10 through NPS 24, $+0.06$ in., -0.03 in.
 (3) The gasket inside diameter tolerance for NPS $\frac{1}{2}$ through NPS 8 is ± 0.016 in.; for NPS 10 through NPS 24, ± 0.03 in.
 (4) The centering ring outside diameter tolerance is ± 0.03 in.
 (5) There are no Class 400 flanges in NPS $\frac{1}{2}$ through NPS 3 (use Class 600), Class 900 flanges in NPS $\frac{1}{2}$ through NPS $2\frac{1}{2}$ (use Class 1500), or Class 2500 flanges NPS 14 and larger.

GENERAL NOTES:

- All dimensions are in inches.
- For reference, see Fig. I-1.
- The gasket thickness tolerance is ± 0.005 in. measured across the metallic portion of the gasket, not including the filler, which may protrude slightly beyond the metal.
- For limitations on the maximum flange bore for use with these spiral-wound gaskets, see Table I-11.
- ASME B16.47 Series A flanges NPS 12 through NPS 24 have the same raised face dimensions as ASME B16.5 flanges.

NOTES:

- Refer to para. 3.2.5 for required use of inner rings.
- The gasket inside diameter tolerance for NPS 26 through NPS 34 is ± 0.03 in., and the tolerance for NPS 36 through NPS 60 is ± 0.05 in.
- The gasket outside diameter tolerance for NPS 26 through NPS 60 is ± 0.06 in.
- The centering ring outside diameter tolerance is ± 0.03 in.
- There are no Class 900 flanges NPS 50 and larger.

58	59.07	60.19	62.19		60.44	61.94	65.19		59.25	61.25	63.75		60.50	62.50	65.50		
60	61.31	62.44	64.19		62.56	64.19	67.19		61.75	63.75	66.25		62.75	64.75	68.25		

GENERAL NOTES:

- (a) All dimensions are in inches.
 (b) For reference, see Fig. I-1.
 (c) The gasket thickness tolerance is ± 0.005 in. measured across the metallic portion of the gasket, not including the filler, which may protrude slightly beyond the metal.
 (d) For limitations on the maximum flange bore for use with these spiral-wound gaskets, see Table 18.

NOTES:

- (1) Refer to para. 3.2.5 for required use of inner rings.
 (2) The gasket inside diameter tolerance for NPS 26 through NPS 34 is ± 0.03 in., and the tolerance for NPS 36 through NPS 60 is ± 0.05 in.
 (3) The gasket outside diameter tolerance for NPS 26 through NPS 60 is ± 0.06 in.
 (4) The centering ring outside diameter tolerance is ± 0.03 in.
 (5) There are no Class 900 flanges NPS 50 and larger.

Table I-7 Inner-Ring Inside Diameters for Spiral-Wound Gaskets for Use With ASME B16.5 Flanges

Flange Size (NPS)	Pressure Class						
	150	300	400 [Note (1)]	600	900 [Note (1)]	1500	2500 [Note (1)]

12	12.50	12.50	12.10	12.10	11.50	11.50	11.50
14	13.75	13.75	13.50	13.50	12.63	12.63	...
16	15.75	15.75	15.35	15.35	14.75	14.50	...
18	17.69	17.69	17.25	17.25	16.75	16.75	...
20	19.69	19.69	19.25	19.25	19.00	18.75	...
24	23.75	23.75	23.25	23.25	23.25	22.75	...

GENERAL NOTES:

- (a) All dimensions are in inches.
- (b) The inner-ring thickness shall be 0.117 in. to 0.131 in.
- (c) For sizes NPS $\frac{1}{2}$ through NPS 3, the inside diameter tolerance is ± 0.03 in.; for larger sizes the inside diameter tolerance is ± 0.06 in. See Table 15 for minimum pipe wall thicknesses that are suitable for use with standard inner rings.
- (d) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

- (1) There are no NPS $\frac{1}{2}$ through NPS 3 Class 400 flanges (use Class 600), NPS $\frac{1}{2}$ through NPS $2\frac{1}{2}$ Class 900 flanges (use Class 1500), or NPS 14 and larger Class 2500 flanges.

Table I-8 Inner-Ring Inside Diameters for Spiral-Wound Gaskets Used Between ASME B16.47 Series A Flanges

Flange Size (NPS)	Pressure Class				
	150	300	400	600	900 [Note (1)]
26	25.75	25.75	26.00	25.50	26.00

40	39.75	39.50	39.38	39.75	41.75
42	41.75	41.50	41.38	42.00	43.75
44	43.75	43.50	43.50	43.75	45.50
46	45.75	45.38	46.00	45.75	48.00
48	47.75	47.63	47.50	48.00	50.00
50	49.75	49.00	49.50	50.00	...
52	51.75	52.00	51.50	52.00	...
54	53.50	53.25	53.25	54.25	...
56	55.50	55.25	55.25	56.25	...
58	57.50	57.00	57.25	58.00	...
60	59.50	60.00	59.75	60.25	...

GENERAL NOTES:

- (a) All dimensions are in inches.
- (b) The inner-ring thickness shall be 0.117 in. to 0.131 in.
- (c) The inside diameter tolerance is ± 0.12 in.
- (d) These inner rings are suitable for use with pipe walls 0.38 in. or thicker.
- (e) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

- (1) There are no Class 900 flanges NPS 50 and larger.

Table I-9 Inner-Ring Inside Diameters for Spiral-Wound Gaskets Used Between ASME B16.47 Series B Flanges

Flange Size (NPS)	Pressure Class

58	58.19	58.44	57.25	58.00	...
60	60.44	61.31	59.75	60.25	...

GENERAL NOTES:

- (a) All dimensions are in inches.
- (b) The inner-ring thickness shall be 0.117 in. to 0.131 in.
- (c) The inside diameter tolerance is ± 0.12 in.
- (d) These inner rings are suitable for use with pipe walls 0.375 in. or thicker.
- (e) Refer to para. 3.2.5 for required use of inner rings.

NOTE:

- (1) There are no Class 900 flanges NPS 50 and larger.

Table I-10 Maximum Bore of ASME B16.5 Flanges for Use With Spiral-Wound Gaskets

Flange Size (NPS)	Pressure Class						
	75	150	300	400	600		
1/2 3/4 1 1 1/4 1 1/2 2 2 1/2 3 4 6 8 10 12 14 16 18 20 24	No flanges	WN flange only (2)	No flanges Use Class 600	No flanges Use Class 1500	WN flange only (2)		
						SO flange (3) WN flange (2)	
							SO flange (3) WN flange, any bore
		SO flange (3) WN flange, any bore					
						WN flange with Schedule 10S bore described in ASME B36.19M [includes nozzle (4) but excludes SO flange]	
		SO flange WN flange, any bore					
		WN flange with Schedule 10S bore described in ASME B36.19M [excludes nozzle (4) and SO flange] (5)				WN flange with Schedule 80 bore [excludes nozzle (4) and SO flange] (5)	No flanges

GENERAL NOTES:

- (a) This Table shows the maximum bore of flanges for which the spiral-wound gasket dimensions shown in Table I-4 are recommended, considering the tolerances involved, possible eccentric installation, and the possibility that the gasket may extend into the assembled flange bore.
- (b) For maximum permissible flange bores for nonmandatory inner rings, see Table 15.
- (c) Abbreviations: SO = slip on and threaded, WN = welding neck, and SW = standard wall.

NOTES:

- (1) Refer to para. 3.2.5 for required use of inner rings. These inner rings may extend into the pipe bore a maximum of 0.06 in. under the worst combination of maximum bore, eccentric installation, and additive tolerances.
- (2) In these sizes, the gasket is suitable for a welding neck flange with a standard wall bore, if the gasket and the flanges are assembled concentrically. This also applies to a nozzle. It is the user's responsibility to determine if the gasket is satisfactory for a flange of any larger bore.
- (3) Gaskets in these sizes are suitable for slip-on flanges only if the gaskets and flanges are assembled concentrically.
- (4) A nozzle is a long welding neck; the bore equals the flange NPS.
- (5) An NPS 24 gasket is suitable for nozzles.

Table I-11 Maximum Bore of ASME B16.47 Series A Flanges for Use With Spiral-Wound Gaskets

Flange Size (NPS)	Pressure Class				
	150	300	400	600	900
26	(1)	(2)	(2)	(2)	(2)
28	(1)	(2)	(2)	(2)	(2)

58	(1)	(2)	(2)	(2)	(3)
60	(1)	(2)	(2)	(2)	(3)

GENERAL NOTES:

- (a) This Table shows the maximum bore of flanges for which the spiral-wound gasket dimensions shown in Table I-5 are recommended, considering the tolerances involved, the possibility of eccentric installation, and the possibility that the gasket may extend into the assembled flange bore.
- (b) Refer to para. 3.2.5 for required use of inner rings.

NOTES:

- (1) Applies only to welding neck flanges with a bore not larger than the inside diameter of a 0.187-in. wall pipe. Larger bores must be checked individually.
- (2) Applies only to welding neck flanges with a bore not larger than the inside diameter of a 0.25-in. wall pipe, except that NPS 38, Class 300, is not suitable for a bore larger than the inside diameter of a 0.30-in. wall pipe. Larger bores must be checked individually.
- (3) There are no Class 900 flanges NPS 50 and larger.

Table I-12 Jacketed Gasket Dimensions for ASME B16.5 Flanges**(12)**

Flange Size (NPS)	Gasket Inside Diameter [Note (1)]	Gasket Outside Diameter by Class [Note (1)]						
		150	300	400 [Note (2)]	600	900 [Note (2)]	1500	2500 [Note (2)]
$\frac{1}{2}$	0.88	1.75	2.00	...	2.00	...	2.38	2.63

16	16.75	20.13	21.13	21.00	22.13	22.50	25.13	...
18	19.25	21.50	23.38	23.25	24.00	25.00	27.63	...
20	21.00	23.75	25.63	25.38	26.75	27.38	29.63	...
24	25.25	28.13	30.38	30.13	31.00	32.88	35.38	...

GENERAL NOTES:

- (a) All dimensions are in inches.
 (b) For reference, see Fig. I-2.
 (c) The gasket thickness tolerance is +0.03 in., -0.000 in.

NOTES:

- (1) For gaskets NPS $\frac{1}{2}$ through NPS 24, the outside and inside diameter tolerances are +0.06 in., -0.000 in.
 (2) There are no Class 400 flanges NPS $\frac{1}{2}$ through NPS 3 (use Class 600), Class 900 flanges NPS $\frac{1}{2}$ through NPS $2\frac{1}{2}$ (use Class 1500), or Class 2500 flanges NPS 14 and larger.

GENERAL NOTES:

- (a) All dimensions are in inches.
 (b) For reference, see Fig. 3.

NOTES:

- (1) The gasket inside diameter (d1) tolerance for NPS 26 through NPS 34 is ± 0.03 in., and the tolerance for NPS 36 through NPS 60 is ± 0.06 in.
 (2) The gasket outside diameter (d2) tolerance for NPS 26 through NPS 60 is ± 0.06 in.
 (3) The centering ring outside diameter (d3) tolerance is ± 0.03 in.
 (4) There are no Class 900 flanges NPS 50 and larger.

MANDATORY APPENDIX II REFERENCES

ASME B16.47, Large Diameter Steel Flanges: NPS 26 Through NPS 60

ASME B36.10M, Welded and Seamless Wrought Steel Pipe

ASME B36.19M, Stainless Steel Pipe

Publisher: The American Society of Mechanical Engineers (ASME), Two Park Avenue, New York, NY 10016-5990; Order Department: 22 Law Drive, P.O. Box 2900, Fairfield, NJ 07007-2900 (www.asme.org)

ISO 9001:2005, Quality management systems — Requirements

ISO 10423:2009, Petroleum and natural gas industries — Drilling and production equipment — Wellhead and Christmas tree equipment

Publisher: International Organization for Standardization (ISO), Central Secretariat, 1, ch. de la Voie-Creuse, Case postale 56, CH-1211 Genève 20, Switzerland/Suisse (www.iso.org)

NONMANDATORY APPENDIX A QUALITY SYSTEM PROGRAM

The products manufactured in accordance with this Standard shall be produced under a quality system program following the principles of an appropriate standard from the ISO 9000 series.¹ A determination of the need for registration and/or certification of the product

¹ The series is also available from the American National Standards Institute (ANSI) and the American Society for Quality (ASQ) as American National Standards that are identified by the prefix "Q," replacing the prefix "ISO." Each standard of the series is listed under References in Mandatory Appendix II.

manufacturer's quality system program by an independent organization shall be the responsibility of the manufacturer. The detailed documentation demonstrating program compliance shall be available to the purchaser at the manufacturer's facility. A written summary description of the program utilized by the product manufacturer shall be available to the purchaser upon request. The product manufacturer is defined as the entity whose name or trademark appears on the product in accordance with the marking or identification requirements of this Standard.
